Sermorelin Tri-Blend

Sermorelin is an injectable amino acid that stimulates the pituitary gland to release HGH. Sermorelin Tri-Blend has added GH-releasing peptides (GHRP-2 and GHRP-6). The synergy between Sermorelin, GHRP-2 and GHRP-6 maximizes efficacy and results.

The benefits of injectable Sermorelin Tri-Blend are similar to HGH:

- ◆ Improved skin and hair texture
- ◆ Increased muscle mass and strength
- ◆ Decreased adipose fat
- ◆ Improved cardiovascular function and lower blood pressure
- ◆ Improved sexual function and libido
- ◆ Improved memory, stress-coping ability
- ◆ Better cholesterol profile
- ◆ Improved immune system resistance

Sermorelin Tri-Blend is often used as a cost-effective alternative to HGH.

- ◆ Sermorelin is significantly less expensive than HGH
- ◆ Sermorelin is cleared for use by the FDA
- ◆ Sermorelin has better physiological activity and a better safety profile than HGH
