

Renewing your vitality since 2003

O-Shot[®]

The **O-Shot[®]** is a procedure specifically designed to help women who are experiencing sexual dysfunction or stress incontinence.

The **O-Shot** rejuvenates the vagina through a nonsurgical procedure that utilizes a woman's own bodily growth factors to stimulate both the vagina and clitoris.

The procedure for the **O-Shot** begins with PRP, which is Platelet-Rich Plasma.

- ◆ The procedure is carried out in less than 15 minutes
- ◆ Virtually no discomfort or pain
- ◆ Little or no downtime

Expected benefits from O-Shot procedure include:

- ◆ A tightening of the vaginal opening
- ◆ Stronger and more frequent orgasms
- ◆ Relief from stress incontinence
- ◆ Increased clitoral stimulation
- ◆ Increased sexual desire

Nearly all women who receive the **O-Shot** procedure experience an increased sexual response and improved sexual function.
